Mayukh Deb

Science

TopoNets (ICLR 2025 Spotlight → toponets.github.io)

Jan 2025

Mayukh Deb, Mainak Deb, N. Apurva Ratan Murty

Inducing topographic structure in Vision and Language models. Yielded brain-like functional organization, parameter efficiency and lower dimensionality.

AtMan (NeurIPS 2023 + featured in Scientific American)

Jan 2023

Mayukh Deb*, Björn Deiseroth*, Samuel Weinbach* et al. (* = equal contribution) Causally trace and explain LLM outputs without gradients. Works on anything with attention. Foundation behind Aleph-Alpha's Explain functionality

DORA (ICLR 2023 Trustworthy ML workshop + TMLR)

June 2022

Kiril Bykov, Mayukh Deb, Klaus Robert Müller et al.

Clustering neurons and detecting spurious outlier features with feature-vis.

Education

Georgia Institute of Technology

Aug 2024 - Present

PhD Student - Cognition and Brain Science - Murtylab

- Mentored by Dr. N. Apurva Ratan Murty
- o Developing brain-inspired algorithms to improve Language and Vision models (see recent work: toponets)
- · Leading the engineering efforts behind training and hosting of state-of-the-art models trained on fMRI data

Experience

Research Engineer @ Aleph-Alpha

Nov 2021 - May 2023

- Led their Explainable AI project and built AtMan
- AtMan was the foundation behind Aleph-Alpha's "explain" API for LLMs
- Also worked on building multimodal search-engines.

Research Intern @ MIT Brain + Cognitive Sciences

 $May\ 2023 - Dec\ 2023$

Worked with Dr. Nancy Kanwisher's lab on 2 projects:

- Inducing brain-like topographic structure in transformers (eventually led to toponets)
- o Training data-constrained vision models on fMRI data

Research Engineer @ Eden.Art

Dec 2023 - Aug 2024

- Worked with stuff like Textual Inversion, IP-Adapters, ZipLoRA etc.
- Built highly flexible pipelines to fine-tune diffusion models (SDXL, SD3) quickly on user data

Intern @ RunwayML

Jan 2021 - Feb 2021

• Implemented, optimized (1.4x speedup) and dockerized pipelines for optical-flow (RAFT) and video frame interpolation (RIFE) models to be used in Runway's video editing tool.

Google Summer of Code @ INCF

May 2020 - Aug 2020

- Worked with OpenWorm to train models to extract metadata from microscopic videos/images embryos
- Also mentored two contributors in GSoC 2023.

Open Source

TopoLoss

- Induce topographic structure in pytorch models during training with this loss function
- o Works on both Linear and Conv layers
- Core codebase behind toponets
- Also released some pre-trained vision and language models

torch-dreams

- o A highly flexible framework to do feature visualization on pytorch models
- o Over 52k downloads on PyPI

Eden

- Single python decorator to convert a python function into a hosted endpoint with queuing (celery)
- o Surprisingly scalable across instances with kubernetes
- o Foundational pet-project which eventually led to eden.art
- \circ 8.4k downloads on PyPI

DevoLearn

- o Trained models to segment embryo data from microscope
- o Outcome of Google Summer of Code, 2020 and then taken forward by other students in the next years

More projects can be found on my github profile: github.com/mayukhdeb

Technologies

Languages: Python and a little bit of CUDA – I just learn whatever is required

Frameworks: PyTorch, NumPy, Pandas
